Summary

Web producer and website manager with 10+ years of experience owning websites from initial requirements and content planning through launch, maintenance, and ongoing improvement. Experienced across CMS production, content strategy, UX, SEO, QA, web operations, and stakeholder coordination, with a software engineering background that supports technical troubleshooting and effective collaboration with developers. Brings a broad understanding of how content, design, technology, and business goals fit together, making it easier to identify problems, set priorities, and move work forward. Strong at turning ambiguous requests into practical solutions and taking responsibility for the details required to keep websites useful, reliable, maintainable, and continuously improving.

Skills & Capabilities

Content Strategy · Information Architecture · Web Copywriting · On-Page & Technical SEO · Local SEO · Google Search Console

Development & Technical Foundation

HTML · CSS/SCSS · JavaScript · TypeScript · React · Next.js · REST APIs · Git/GitHub

Professional Experience

Web Producer & Website Manager | Opus Webworks

Everett, WA | November 2023 - Present

- Own website projects end to end, from discovery and requirements through content planning, design, CMS production, launch, maintenance, and ongoing improvements for small businesses and nonprofit organizations.
- Turn loosely defined client goals, feedback, and constraints into clear scopes, priorities, timelines, and executable website work, handling proposals and client communication from initial discussions through launch.
- Lead hands-on production across CMS platforms and custom website builds, creating page layouts, CMS structures, content, navigation, forms, integrations, redirects, metadata, and QA.
- Shape information architecture, user journeys, content, and page structure around how people actually find, understand, and act on information, combining UX, copywriting, responsive design, and conversion-focused thinking.
- Own the operational side of the web, including hosting, domains, DNS, deployments, maintenance, performance improvements, and technical troubleshooting, researching and testing unfamiliar issues until they are resolved.
- Build practical SEO into website production through on-page optimization, internal linking, redirects, sitemap management, structured content, and Google Search Console.

Full-Stack Software Engineer | BillGO

Redmond, WA | August 2019 - November 2023

- Built and maintained internal web applications and tools for integration engineers using TypeScript, React, Node.js, HTML, and CSS across both front-end interfaces and supporting backend functionality.
- Worked within a small Agile engineering team, taking tools from requirements through implementation, code review, testing, release, troubleshooting, and continued iteration.
- Led and presented new project work to company stakeholders, explaining the problem being solved, proposed approach, technical considerations, and expected impact.
- Created and maintained extensive technical documentation for internal tools, workflows, implementation details, and team processes, helping other engineers understand, support, and extend the work.
- Diagnosed and resolved UI, browser, backend, usability, and implementation issues across internal tools, often working through unfamiliar problems to determine practical solutions.

Web Designer & Developer | Independent

Bothell, WA | January 2016 - August 2019

- Designed and built custom websites for small businesses and organizations, taking projects from initial requirements and content planning through visual design, development, launch, and ongoing support.
- Turned client goals and loosely defined ideas into clear site structures, page layouts, responsive designs, and usable digital experiences.
- Built and customized websites using HTML, CSS, JavaScript, Next.js, and CMS platforms, including custom front ends powered by headless CMS implementations.
- Tested and refined websites across screen sizes and browsers, improving layout consistency, usability, performance, and asset delivery before launch.
- Managed the technical foundation of client sites including hosting, domains, DNS, deployments, updates, maintenance, and troubleshooting.

Selected Web Projects

Whale Scout | whalescout.org

WordPress · Headless CMS · Next.js · Content Architecture

Modernized a content-heavy nonprofit website while preserving the organization's existing WordPress publishing workflow. Restructured and migrated years of content using custom content models and a headless architecture, giving the public-facing site more flexibility without disrupting how staff managed content. Owned the work across CMS structure, front-end delivery, integrations, QA, launch, and ongoing improvements.

Snohomish County Sheriff's Office | scsojobs.com

Webflow · Information Architecture · Content Strategy · UX · Copywriting

Led the recruiting website from content planning and information architecture through UX, visual design, production, and launch. Reorganized a complex hiring process around the questions prospective applicants actually needed answered, creating clearer navigation, content paths, and calls to action. Translated stakeholder input and dense internal information into a focused, applicant-facing web experience.

Cascade Kitchen & Bath | cascadekb.com

WordPress · Elementor · Copywriting · UX · Local SEO

Led the website from discovery and content planning through copywriting, design, CMS production, QA, launch, and ongoing support. Turned loosely defined business goals and service information into clearer page structures, messaging, and conversion paths. Managed the practical production and operational details around the site, including responsive implementation, forms, metadata, performance, hosting, maintenance, and ongoing updates.
